

Test data will be released before 3pm and you will have an hour to generate your results and submit them by 4pm. The submission link will be closed strictly at 4:05pm and any submission after that will not be considered.

Submission instructions:

1. Results and report submissions:

Please submit your results here: <https://forms.gle/aGxGcBrZYEnyfHMD7>

2. Code submission:

Please upload your codes in your own public repository and attach the link in the aforementioned form. Make sure your codes are readable and running. You don't need to push every single code that you have run throughout the competition, just submit your best feature-based model's code and your best deep learning based model's code. Make sure the code takes input as it is supposed to (in the format that is given in the test file) and spits outputs in the same format as seen in eval_script/dev_pred_labels.txt.
